Joint session: Vaccination and infections
ERS/Industry joint session supported by GSK and Janssen

Aims : COVID 19 has demonstrated the importance of infection diseases in terms of morbidity and mortality, especially for people with chronic respiratory diseases. Vaccination is the most important preventive measure against this. Many vaccinations are recommended in our guidelines worldwide. Even so, vaccination rates are still low. The aim of this symposium is to present the current status in the development of various vaccines and thus move the importance of vaccination more into the focus of care for respiratory patients. SARSCorona2 as the new, influenza as the classic and pertussis infectious disease as the forgotten will be presented in this symposium. The current standing of vaccination and the development of vaccines for this will be reportedd. Strategies to increase vaccination rates will be discussed.

Symposium: Innate immunity and lung epithelial repair: what really happens?

Epithelial repair responses upon respiratory infection and lung tissue damage

Aims : to describe the mechanisms underlying epithelial barrier disruption and impaired recovery in response to environmental triggers, which are crucial for the development of novel therapeutic strategies, including stem cell-based strategies; to provide an overview of the cellular and molecular mechanisms involved in epithelial damage and repair as well as abnormalities of these mechanisms in lung disease and regulation of these processes by virus-induced innate immune responses; to explain the complex role of the epithelial barrier in the onset and progression of pulmonary diseases and its To potential to serve as a target for therapeutic strategies; to differentiate between epithelial cell death modalities and to describe how these contribute to lung tissue damage in chronic obstructive pulmonary disease (COPD); to explain how the release of specific danger molecules upon epithelial injury, e.g., those acting on receptor for advanced glycation end products (RAGE), can result in alveolar tissue damage and impaired lung tissue regeneration in COPD; to describe the role of innate immune responses in abnormal lung tissue regeneration upon viral infection; to describe the potential of stem cells for epithelial regeneration upon infection in cystic fibrosis (CF) patients.

Lungs on fire: LoF Pulmonary vascular diseases?

Aims : To describe real-life clinical cases during the innovative interactive session, including the presentation of cases that have various levels of difficulty and often necessitate a differential diagnosis. This session will be led by a discussant, who will present the cases to a panel of experts and the audience. The discussant will encourage discussion among the panel of experts, who are encountering these cases for the first time. To further determine diagnostic and therapeutic options for these patients, the discussant will also invite audience participation in the reflexion and discussion of these cases.

Respiratory medicine meets other disciplines: Emerging data for the management of respiratory tract infections

A joint ERS/ESCMID session. Results from the current European Clinical Research Initiative on Antimicrobial resistance and emerging Infectious Diseases (ECRAID) - Value-Dx project

Aims : To present the first data emerging from the European project of Value Dx aimed at investigating the use of old and new diagnostic tests to optimise the use of antimicrobials and the management of respiratory infections across different settings (from primary care to intensive care units); to provide an overview and update of the role of diagnostics in the management of respiratory infections by reducing the overuse of antimicrobials and optimising clinical outcomes, utilisation of healthcare resources and economics. The Value Dx project is part of the European clinical research initiative on antimicrobial resistance and emerging infectious diseases.
